

Astronomy course: is interest growing in Ukrainian Wikipedia?

Is interest in astronomy growing in Ukrainian Wikipedia, and how far can we trust it?

Period: Sep 2024 – Aug 2026 · Ukrainian (uk) · human views · Generated 2026-09-26

Key findings

- Ukrainian (uk) — growing: +11.0% year over year without spikes (90% CI +9.9%...+12.0%; 12/12 months higher), ≈28k views/month; confidence HIGH.
- Ukrainian (uk): the whole uk.wikipedia changed +2.0% YoY; relative to it (share of all its views), interest in the topic changed +8.8%.

bar colour = confidence: green high, amber medium, red low

Option	Views / month	YoY w/o spikes (90% CI)	vs whole wiki	Trend	Confidence
Ukrainian (uk)	28k	+11.0% (+9.9%...+12.0%)	+8.8%	growing	HIGH (100)

Recommendation & next steps

- Validate the top option with a cheap demand test (landing page, ads, waitlist) before building.
- Check search-engine and app-store keyword volumes for the same topic and languages.
- Re-run in 3 months to confirm the trend; add related articles to the basket for robustness.

Method & limitations

Method: Wikimedia Pageviews API, human views (agent=user), article + redirects summed; growth = last 12 months vs previous 12 (same calendar months) after spike removal; 90% CI = paired month bootstrap; trend test = seasonal Mann-Kendall; confidence = explainable rule score (volume, consistency, spikes, platform agreement, data artefacts).

Pageviews measure curiosity, not willingness to pay: use them to choose what to validate next, not as demand. A language edition is not a country: many people read another language's Wikipedia (often English), and one language can span many countries. Human traffic (agent=user) still contains some undetected bots; short spikes are replaced by a rolling median before trends are computed. Overall Wikipedia traffic is shifting (AI answers, search changes, 2025 bot reclassification), so growth is also shown relative to all views of the same language edition.
